

# PROXIMAL HUMERUS FRACTURE (NON-OP) NON-OP PHYSICAL THERAPY PROTOCOL

| Patient Name:   | Date: |
|---|-------|
| Evaluate and Treat Provide patient with home program              |       |
| Frequency: x/week x weeks   |       |
| Goals:  |       |
| 1. Increase ROM while protecting the fracture site.               |       |
| 2. Control pain and swelling (with exercise and modalities)       |       |
| 3. Perform frequent gentle exercise to prevent adhesion formation |       |
| Phase I -Early Motion Phase (0 - 5 weeks)                         |       |

## Week 1- Early Passive Motion:

- 1. Wear the sling at all times except to exercise
- 2. Hand, wrist, elbow, and cervical AROM
- 3. Grip and wrist strengthening
- 4. PROM: supine Flexion to 90o and ER (very gentle)
- 5. Modalities as needed for pain relief or inflammation reduction

#### Week 2:

- 1. Apply hot packs 10 minutes before exercising
- 2. Begin pendulum (Codman) exercises with circles in and out
- 3. Soft tissue mobilization
- 4. Supine ER with a stick to 30o
  - a. Support elbow on a folded towel with shoulder in 15∞ ABD 5.
- 5. Scapular Stabilization
  - a. Scapular clocks
  - b. Scapular retractions (no shoulder extension)

# Week 3 - 5 Begin AAROM when pain diminishes and pt is less apprehensive:

- 1. Continue all above exercises
- 2. Begin gentle AAROM flexion to 140o if clinical situation is stable
  - a. Supine Cane flexion
  - b. Supine AAROM with therapist assistance or with hands clasped
- 3. Begin pulley for flexion to tolerance
- 4. Begin submaximal isometrics ER, and flex (week 3 4)
- 5. Begin flexion and ABD on slide board or table to tolerance

## Phase II - Active Motion Phase (Weeks 6 – 12))

#### Week 6 - 8 AROM:

- 1. Establish full PROM
- 2. Begin AROM
  - a. Supine flexion to patient tolerance
  - b. Progress to seated (or standing) flexion with a stick
  - c. Seated flexion with elbow bent and arm close to the body
  - d. Perform ER and ABD with hands behind head
  - e. Sidelying ER (pain-free)
  - f. Serratus Punches
- 3. Begin Extension and IR: (PROM, AROM and Isometrics)
- 4. Begin multi-angle isometrics
- 5. Continue PROM and begin gentle patient self-stretching (week 7–8)
  - a. Flexion: put hand on wall or top of door
  - b. ER: hold onto door jam and twist
  - c. IR: use good arm to pull affected arm into IR

#### Week 8 - 10 - Early Resisted ROM

- 1. Begin Theraband for IR, ER, flexion, ABD, and extension
- 2. Begin supine IR, ER with 1# (arm supported at 15∞ ABD) (pain-free)
- 3. Begin UBE with no resistance
- 4. Prone Ext and ABD (pain-free)
- 5. Progress to adding weight to above exercises only if pain-free
- 6. Biceps / Triceps strengthening with dumbbells

### Phase III - Aggressive Stretching and Strengthening Phase (beginning week 12)

- 1. Isotonic strengthening with weights all directions
- 2. Increase theraband or use rubber tubing
- 3. Increase stretches on door and add prone stretches
- 4. Begin functional or sport activity for strength gain
